PRESIDENT'S MESSAGE

Well, make no Bones about it – we shared the Gallery with real Dinosaur Bones and beautiful Orchids. We had a great meeting with a presentation from Tony Millet. Tony is such an enthusiastic person who is always willing to share his orchid knowledge and techniques for repotting. Tony has been growing orchids for many years and is a hybridizer who has created award winning crosses. Could you tell how much he enjoys orchids? Did you learn something new, a trick or a tip that you can use? I hope so!

This month we have a presentation titled, “Giant World of Miniature Orchids & How to Grow Cool in Florida” by Tomas Bajza, who developed a passion for these minis and has become an expert. We are always encouraging you to try something new, “try it - you’ll like it!” Many of us are limited on space outdoors or want to grow indoors and this just might be something that works for you. It has been six years since we had a presentation on miniature orchids, so I am looking forward to this. Be sure to read the article about Tomas. He has provided a link to his website and a pre-order list for you. There will be a sales table at the meeting. I hope you will be inspired by these little wonders of nature.

Do you have the new book, The American Orchid Society Guide to Orchids and their Culture? We purchased the books by the case to have them available to you because as a Society we got a fabulous price! We are passing that savings onto you and selling them at our cost of \$15.00 each... This book is packed with information on repotting to pest control and color photos of Orchids you might want to add to your collection.

The FGOS Show and Tell Table is a learning experience for you... The SHOW part is so you can see orchids that will grow well in our area and you can get the names of the ones that capture your interest. The TELL part is the grower sharing with you their recipe for success in growing and blooming that orchid. They are asked where they purchased the plant, the conditions where they grow the orchid and how they fertilize to get those beautiful blooms. If you see something you like take a picture of the flower and the orchid name for your future shopping list. [\(click here to print your Show & Tell Form\)](#)

We are thinking ahead to 2020 and want to know what kind of presentations you are interested in... The suggestion box is where you can share your ideas with us! Would you like to go visit a grower? Hear a certain speaker? Have a workshop on repotting (or other topic)? Learn about a certain genera or species? Discussion on pest and diseases? Have a Society Event/Picnic (when the weather is cooler)? or an idea you have thought about?? Please Let us know in the Suggestion Box...

The Membership Drive is about to begin. Our year runs from September 1st thru August 31st. We hope you will continue with the Society or become a member if you haven't joined already. It's a real deal for \$25.00 a year with all the fabulous speakers, programs and activities that are brought to you. Your annual support and raffle ticket purchased helps cover the cost of the speakers, the raffle table plants purchased, room rent and the holiday plants. Your participation is greatly appreciated as this is your Society! [\(click here to print your Annual Renewal Form\)](#)

Have a Happy Fourth of July! See you at meeting – Jan

SPEAKERS' ARTICLE

Hi to orchid lovers!

To introduce myself — my name is Tomas Bajza and I am an orchid lover and addict. I will be speaking to FGOS on Monday, July 8th on the "Giant World of Miniature Orchids & How to Grow Cool in Florida"! You will learn many tips ...all about how to grow miniature orchids, what are miniature orchids, difference between minis and large plants, watering / fertilizing / mounting / and growing them - indoors and outside. Some tips you can even apply to growing orchids that are not miniatures in 'cool' ways!

I originally came to the USA from the Czech Republic and settled down in hot tropical Miami.

I adored orchids during my teenage years, but at that time there were not many to see in my country. My orchid

beginnings were funny and sad, all at the same time. I managed to obtain few orchid plants back in Czech, two Phalaenopsis plants, and one Cymbidium plant. I had neither knowledge nor options to do some research (the Internet was really not present), so I grew as I felt. That approach was of course totally wrong. My poor Phals were over-watered constantly and kept by the window right above the heating, so the humidity was at zero. They must have hated me all these years as they were suffering and barely surviving, but I got at least one spike once, before they both went to orchid heaven.

My Cymbidium was even "better". That sucker did nothing except grow leaves for years. Then I went to college and moved out of the house, completely forgetting about the plant. Once I came back home in the fall, my mother called me outside to our courtyard, when I got there, she pulled out from behind the Oleander bush my forgotten Cymbidium with absolutely amazing long spike carrying some 40+ green waxy blooms. I was shocked, as I was not able to bloom this plant for many years. So, I asked her what did she do with it. She replied, "I just threw it outside behind the Oleander bushes early spring, watered it with the hose when watering oleanders, and fertilized it with chicken poop when fertilizing my oleanders, that's it!"

I was laughing my a** off about my over-caring this plant for so many years with no success while my mother just threw it outside behind the bushes. That's it, she gets the blooms!

Even though I am living in Florida surrounded by orchids, I got into serious orchid growing only over a decade ago, starting with the usual grocery store Phalaenopsis and Dendrobiums, slowly adding Cattleyas and Vandas since these were the orchids that everyone in Florida grew! All of these were large orchids and mostly hybrids. I was constantly searching different online orchid forums and saw post about Lepanthopsis astrophora — that was the very first time I had ever seen a miniature orchid. I had no clue that such a thing even existed! I fell totally in love and immediately ordered a few. When they came, they were even smaller than I ever imagined!

That was it, I've got bitten by a "huge" miniature orchid bug — and in the past years I was fortunate enough to collect hundreds of micro and miniature orchid species, many of them pretty rare. I am a very stubborn grower — I do not listen to anything, and I do not like the word "impossible". I like all orchids, but I do love huge amount of cold or intermediate growing species. Many growers in Florida told me that I cannot grow these here, because it is too hot or they are too hard to grow. I do not believe any of this till I try things myself and either succeed or fail!

Through extended research, reading and being active on different orchid boards and in orchid groups, I've learned tremendously. I do not consider myself in any way orchid expert, but someone once told me that a beginner orchid grower is someone who killed less than 10 plants, advance orchid grower is someone who killed more than 100, and an orchid professional is someone who killed over 1,000 and doesn't count anymore. By this yardstick, I do belong to advance growers >100 but < 1,000.

I've been very fortunate with meeting and becoming friends with many international orchid growers and nursery owners. At the beginning, I bought only plants sold by US nurseries. Nowadays, nearly all my orchids come from abroad. Buying orchids from US growers is safe and most of the plants come nicely established. Unfortunately, there are no species I am looking for offered by the US vendors anymore. I was really pushed to search and start my own importing because I could not just find any of the plants I wanted to own.

There is another "hobby" I do have, love for photography. With a growing miniature orchid collection, there were endless opportunities for taking the pictures of these amazing, sometimes microscopical blooms. Posting my pictures online caused quite a "buzz" leading to first invitations from various orchid societies to provide speeches for their members about growing miniature orchids and cold growing species in hot environment.

Here we are today... What used to be a "hobby" slowly grew to a small business that is expanding. We found out there are hundreds of growers, like me, searching for these hard to find, unusual, uncommon and rare micro and miniature orchids. Thankfully we can share our babies with the rest of the orchid world via our website and educate people interested in growing miniature and small orchids through my speech engagements across the USA. A number of my articles about miniature orchids were published in orchid magazines across the globe as well.

Doing what you love is the most rewarding thing in life!

I look forward to talking to FGOS!

I hope you will come and enjoy! - Tomas Bajza

FGOS July General Meeting: Monday, July 8th, 2019 @ 7:30 P.M. in The Gallery @ Flamingo Gardens – Tomas Bajza will be the Speaker on Miniature Orchids
Doors OPEN @ 7 P.M. – Please bring your plant for Show & Tell from 7 P.M. – 7:15 P.M.

WPBJC AOS July Business Meeting & Judging: Saturday, July 27th, 2019 – Visitors Plan to Arrive after 12:30. Judging Begins @ 2 P.M. in The Gallery @ Flamingo Gardens (arrive by 1:30 P.M. if you are bringing plants to be judged)

FGOS July Board Meeting: Monday, July 22nd, 2019 @ 7:30 P.M.

(Members Are Welcome to Observe & See What It's Like to be a Board Member. If interested, please RSVP with Jan Amador @ 954.347.2738)

FGOS August General Meeting: Monday, August 5th, 2019 @ 7:30 P.M. in The Gallery @ Flamingo Gardens – Melana & Jim Davison will Speak on Laelia Anceps

WPBJC AOS August Judging: Saturday, August 24th, 2019 – Begins @ 2 P.M. in The Gallery @ Flamingo Gardens (arrive by 1:30 P.M. if you are bringing plants to be judged)

FGOS August Board Meeting: Monday, August 26th, 2019 @ 7:30 P.M.

(Members Are Welcome to Observe & See What It's Like to be a Board Member. If interested, please RSVP with Jan Amador @ 954.347.2738)

FGOS September General Meeting: Monday, September 9th, 2019 @ 7:30 P.M. in The Gallery @ Flamingo Gardens – Lou Lodyga will Speak on Unifoliate Cattleyas
Doors OPEN @ 7 P.M. – Please bring your plant for show and tell from 7 P.M. – 7:15 P.M.

FGOS September Board Meeting: Monday, September 23rd, 2019 @ 7:30 P.M.

(Members Are Welcome to Observe & See What It's Like to be a Board Member. If interested, please RSVP with Jan Amador @ 954.347.2738)

WPBJC AOS September Judging: Saturday, September 28th, 2019 – Begins @ 2 P.M. in The Gallery @ Flamingo Gardens – Education session begins @ 12:30 P.M. (arrive by 1:30 P.M. if you are bringing plants to be judged)

REPOTTING WORKSHOPBy Tony Millet – axxmillet@gmail.com

RULE ... DON'T REPOT UNLESS YOU HAVE A GOOD REASON TO REPOT. THE AVERAGE REPOT WILL COST AT LEAST 6 MONTHS TO ONE YEAR OF PLANT TIME AND PLANT GROWTH.

WHY REPOT???

- Plant over the edge
- Plant in the wrong media for your growing conditions
- Plant is bare rooted
- Plant root system is dying
- Plant is not happy
- Plant is too large and needs to be divided

CONSIDER SIZE OF PLANT'S ROOTS. LARGE, MED AND SMALL MEANS ROOTS' CIRCUMFERENCE:

- Phalaenopsis have large, med and small roots.
- Paphiopedilum have medium and large roots.
- Cattleya, including Encyclia, have large, med and small roots.
- Vandas have medium to large roots
- Dendrobiums have small and medium roots

Vandas Repotting—(If you don't just hang them from an S-Hook...Vandas have large hanging roots; divide and tie the plant to either a wire hanger or a hanging basket or a large pot. Use large media.

All others orchids listed above can be accommodated in pots or mounted.

REPOTTING MEDIA. COST IS TO BE CONSIDERED:

What media do you use? There are so many and in so many combinations. Your repotting pantry should include various media and options.

- Clay pebbles—various names, i.e., hydroton, expanded clay, hydrokorrels, etc. Buy medium size, smash for finer, does not breakdown
- Tree fern—lasts 3-4 yrs. Comes as plaques or baskets for mounting; hard fibers or cubes for mix
- Sponge Rok (adds air pockets to mix). Comes medium to large size unless crushed, last 3 4 yrs.
- Orchiata. Comes small, medium and large. LONG LASTING
- Sphagnum Lasts 2 to 3 years depending on quality. Hi grade AAAA long fibered with the least debris will last 2-5 yrs. (Uses for sphagnumPhalaenopsis, Bulbophyllum, fine roots plants, cool growers in warm climates, has antiseptic properties, as top dressing for Paphiopedilums and Phalaenopsis and Phragmipediums, Cattleyas, improves potting mix with tree fern and sponge rok. GREEN tree moss or Shag moss.
- Other ingredients as needed- charcoal (long lasting), coconut husk (one year), bark (2 years)

Mix size of media grade to match plant root size! Small root diameter - size small size media; medium size medium root diameter - medium size media; large root diameter - large media.

TONY'S BASIC MIX:

- 1/3 tree fern
- 1/3 sponge rock
- 1/3 hydroton pebbles
- Enough sphagnum moss to hold moisture

Use a large plastic zipped bag. Add water to the mix so that the mix is coated consistently throughout with water but not sloppy wet. Use hot water or microwave the mix one minute.

SELECTING POT SIZE AND TYPE:

Pots can include plastic as well as clay terracotta, baskets -- wire as well as natural containers such as coconut, tree fern squares and balls, etc. and other innovative containers that have adequate drainage.

Next size up is the normal from the size of the pot the plant is in, but 1 inch from the edge is the better rule.

POTTING TECHNIQUE IS VERY IMPORTANT:

Keep tools 3 pairs of scissors and knives. Clean tools in a 10% solution of bleach or a solution of TSP (Trisodium phosphate - mix TSP in a jar of warm water and keep adding and stirring until no more TSP will dissolve in the bottom of the jar. Bleach or TSP solution should be changed monthly.

Positioning the plant high in the pot; back fill the media; stabilize the plant

IF bareroot (meaning NO ROOTS) then artificial roots can be given by tying wire around the pseudobulb and out through the bottom of the pot and secured. Position the plant and fill in media.

If plant has roots, then clips can be used if needed. Hold the plant by its leaves to check that it doesn't pull out of the pot.

NON-AGGRESSIVE REPOTTING:

- **POT IN POT- No cutting or dividing**....IF plant is finicky and does not like to be uprooted then use the gradual addition of media to a next size up pot so basically pot in a pot.
- **Attach a chunk of Tree Fern** to the edge of the pot where the plant is climbing allowing the roots to attach to the outside tree fern and then 6 months later cut and then repot
- **Attach another pot** to the side of the pot where the plant is growing and fill with media and allow to new growth to grow into that pot. Once it does (at least 3 pseudobulbs) then cut and separate the pots.
- **Push or Move the plant** back in the pot and fill forward section with media.

AGGRESSIVE DISTURBANCE AND DIVIDING:

If the plant is a vigorous grower, strip it down and clean all segments and divide it into 3-5 pseudobulbs bulbs and lay the divisions on a bed of LIVE sphagnum or shag moss until new roots are visible then repot .

SPECIALTY MOUNTING PLANTS WITH A BACKGROUND OF AND HYBRIDS OF THE FOLLOWING: (NOTE MOST OF US HAVE THESE PLANTS IN OUR COLLECTION. Use Google to look up the background and culture of your plant):

- Cattleya walkeriana - mount horizontally
- Cattleya mossiae and those Cattleyas in the labiate group - add extra ingredients to keep cooler and slight damper
- Cattleya warszewiczii (formerly called Cattleya gigas)- mount to accommodate new rising (above media) growth
- Rhyncholaelia digbyana (formerly called Brassovola digbyana and Psychopsis papilio mount to accommodate fine root structure
- Broughtonias - mount to accommodate the plant at an angled growth
- Sophronitis – (cool growing Cattleyas...i.e., former Slc's) mount to accommodate quick drainage and yet added a pocket root crotch/shelf - mounting for coolness
- Cattleya dowiana- mount to accommodate tall structure pseudobulbs

WATERING:

Newly divided repotted plants should be watered once a week (in a plastic pot), twice a week if the pot is quick draining or porous such as clay, for the next 4 to 8 weeks. Start fertilizing after 8 weeks with a weak weekly 20-20-20.

OTHER NEED TO KNOW INFO:

Don't forget to add the date of repotting on the nametag of the plant. If a new division, make another tag. If possible take a picture of the newly repotted plant so you can judge its progress at the time of year you repotted it.

MOUNTING TO LIVING TREES OR OTHER ITEMS:

All newly mounted plant roots should be covered with some moss or coconut fiber to give added protection to the roots and prevent animals from biting at the new emerging roots. Mount along the natural water run off line along the trunk or limb. (Examine the tree and look for the darker side of the trunk...that's where the water flows when it rains and you want to mount on that side!)

MOUNTING VERTICAL AND HORIZONTAL, ON TREE FERN, OR HARD WOOD LIKE CYPRESS:

Select the mount to be used. Hardwood is the best choice. Place a thin pad of sphagnum moss and wire wrap to the mount,

RUBBERBAND OR BUNGEE CORD TECHNIQUE:

Place the root zone of the plant on the moss pad, the growth eye to the left or right of the mount but not up against the mount, (reason.... if water accumulates at the growth eye, it will cause rotting of the new growth). Then secure the new plant to the mount using wire or string.

Note if mounting Phalaenopsis: Securing the plant is very important and leaning it to its side so that water does not stay in the crown of the plant contributing to crown rot.

TIPS AND GOOD INFO:

- Cheap tools at Dollar Store.
- Inscribe on the outside of the pot either the initials of plant or full name
- When you water or mist, point down not across the plant
- Use a transparent pot to see the condensation at the root level.
- Check to see if pieces of the sphagnum are turning green (or a green tint). This indicates the ph is good with adequate moisture
- If you have a piece of live moss (SHAG) then add to the top of the mix near the base of the plant. You might find live green moss growing around a gutter downspout or along the edge of a concrete patio or the house if it gets dampness
- Use bungee cords to fasten plants to a wire shelf
- Use garden paver edging to lean Phalaenopsis in a pot on so the water does not remain in the crown of the plant causing crown rot.

Award Number: 20192189
Date: 02/20/19
Provisional: Final:
Plant Show: Public:
Plant: Cattleya A Miracle Everyday
Cultural name: Sandi Block Brezner
Parentage: C. Ingei C. Green of Life
Comments:
Previous Awards received by this plant: None
Has plant been submitted previously for AOS judging on the same inflorescence? Yes No
All entries are subject to Rules and Regulations as outlined in the Handbook of Judging and Exhibition, published by the American Orchid Society.

Measurements in centimeters	Width, cm.	Length, cm.
Natural Spread:	Herz 9.0	Vert 8.8
dorsal Sepal:	1.7	5.0
Petal:	3.1	4.1
Lateral Sepal (Synsepal):	1.8	4.1
Lip (Pouch):	1.5	3.0

Description: beginning with the number of flowers and buds and inflorescence
Three flat, star-shaped flowers on one 13 cm inflorescence; sepals and petals golden yellow, with narrow cherry red lines, wider in dorsal greater yellow, overlaid burgundy apically; column cream (occasionally by red-brown lines, substance medium) texture crystalline, lip velvet.

Award: AM and Score 80 points
